**Abstract:** In the title molecule,  $C_9H_{10}BrN_3O_2S$ , the thiazine ring has an envelope conformation with the S atom at the flap. The geometry around the S atom is distorted tetrahedral. In the crystal, inversion dimers linked by pairs of N-H...N hydrogen bonds occur, generating  $R_2^2(6)$  ring motifs. N-H...O hydrogen bonds and C-H...O interactions connect the dimers, forming a three-dimensional network structure.
